

An Analysis of the Variation in Form of the Dog-Whelk under Different Ecological Conditions

C. McManus, S 6 Sc.

RESULTS OBTAINED BY I. C. McManus, S. Richards and J. J. Ryder of S 6 Sc. while on a field course at the Leonard Wills Field Centre, Taunton, Somerset in October 1968.

THE DOG-WHELK, *Nucella lapillus*, is a marine gastropod with a whitish-coloured, spirally coiled

remove every dog-whelk from its surface.

This removes any human error due to
removing only the most obvious dog-whelks.
